WILLIAM J. BICKNELL, M. D.
COMMISSIONER

March 1, 1975

To the Honorable Senate and
House of Representatives

I have the honor to submit herewith as required by Chapter 111, section 2, of the General Laws, the one hundred and thirty-second annual report on statistics of births, deaths, fetal deaths, marriages, and divorces in Massachusetts for the calendar year 1973.

In accordance with Chapter 508, Acts of 1964, this is the tenth Annual Report of Vital Statistics published by the Department of Public Health, and is intended for administrative and research purposes connected with health programs and population studies.

Respectfully submitted,

A large, stylized handwritten signature in dark ink, appearing to be "W. J. Bicknell".

William J. Bicknell, M.D.

Commissioner

Introduction

This is the tenth Annual Report of Vital Statistics prepared by the Department of Public Health. It tabulates Massachusetts births, deaths, fetal deaths, marriages and divorces occurring in the 1973 calendar year.

As in previous reports, the tabulations of births and deaths are based primarily on residence rather than on occurrence information. Marriages, divorces and fetal deaths that involve Massachusetts residents and that occurred outside the Commonwealth are not included.

The vital statistics reported here are offered annually as reliable data for the benefit of a variety of interests. Births and deaths are essential components of population estimates and projections and are provided annually only in this report. However, a third element of population is migration; the Vital Events Program receives no reports at all relating to migration and therefore caution is advised to any who would be tempted to go beyond the limits of these data alone for estimating populations.

On the other hand, several of the facts given on birth and death certificates are loaded onto magnetic tape but do not appear in these tables. It would be impossible, obviously, to construct and publish all tables deriveable from the data collected and processed. Some tables are produced annually but are not published; they are on file with the Vital Events Program.

Two examples are (a) tables of births and neonatal deaths by weight of baby, residence of mother, etc., for babies born in each of the Commonwealth's hospitals providing maternity services; and (b) a table of all deaths ordered by cause of death and residence within each cause, as well as age, sex, marital status, etc., for each decedent.

In addition to the data tapes and unpublished tables, the Program has microfilm of certificates of births, deaths, and marriages since 1967. Recent progress in data processing permits accessibility to vital events data of increased timeliness. Agencies, both public and private, needing information for program planning and research are encouraged to contact the Vital Events Program for possible utility of these data.

Questions concerning these data and requests for more detailed findings should be sent to the Director, Office of Health Planning and Statistics, Massachusetts Department of Public Health, Room 335, 80 Boylston Street, Boston, Massachusetts 02116.

Telephone: Area Code 617, 727-2977.

Definitions

Residence is defined as that of the deceased for a death and that of the mother for a birth or fetal death.

Immature birth is considered as one for which the birth weight is 2,500 grams (5 pounds 8 ounces) or less, regardless of the period of gestation.

Infant death is considered as the death of a child under one year of age.

Neonatal death is considered as the death of a child occurring during the first twenty-eight days of life.

Fetal death is the death of the product of conception prior to the complete expulsion or extraction from its mother, irrespective of the duration of the pregnancy. The death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Findings in this report are reported fetal deaths of 20 weeks gestation or more.

Perinatal mortality is expressed as the sum of neonatal and fetal deaths. A standard definition of perinatal deaths is lacking; some authorities include with neonatal deaths only those fetals of at least 28 weeks gestation; others add to fetal deaths only those babies who died in their first week of life.

Underlying cause of death is defined as the disease or injury which initiated the sequence of morbid events leading directly to death or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

Rates for infant, perinatal, neonatal, and fetal deaths are derived by using the number of live births in the denominator. Fetal death rates are included in Tables 13-15; while rates per se for the other children's deaths are not presented among the tables, they can be calculated from the data presented in Table 3. Infant and neonatal mortality rates are expressed as the number of respective deaths per 1000 live births. Fetal death and perinatal death rates are expressed in terms of 1000 deliveries; consequently, the denominator for each rate is the sum of live births and fetal deaths (divided by 1000). The fetal death rate purports to indicate the rate of unsuccessful pregnancies, although a slight error is inherent, because no abortions or miscarriages of fetuses of less than 20 weeks gestation are reported. It should be noted here that fetal deaths are most probably underreported due to a variety of reasons, among which, for instance, are burial requirements and illegitimacy.

INTERPRETATION OF DATA

Resident births in Massachusetts continued to decrease in 1973, although the rate of decline abated somewhat. In 1971 there were 7.3 per cent fewer births than in the previous year, and in 1972 the drop was 11.4 per cent. The 72,237 Massachusetts births in 1973 are just 6.0 per cent less than in 1972. Decreases were common to the nation and to the state's regions but the degree varied.

PER CENT DECREASE IN BIRTHS, 1972-1973

United States	3.7*
Massachusetts	6.0
Region	
1	7.2
2	2.1
3	8.9
4	9.3
5	6.1
6	8.2
7	2.7
8	6.1

(*Monthly Vital Statistics Report, vol. 23, no. 11 (Jan. 30, 1975); National Center for Health Statistics, Rockville, Md. 20852).

The number of resident deaths in the Commonwealth continues to approximate 57,000. Since 1969 the proportion of male deaths has continued to be very close to 53 per cent of the total.

The fewer births and constant deaths have markedly reduced the contribution of natural increase to the State's population. From 1969 to 1973 the drop was 57%, from almost 35,000 to only 15,000.

It is interesting to note that the sex differences in Table 3 are consistent with the tabulations for the previous four years. Approximately 51% of all live births are males, and about 52% of all mature births are males; but 53% of the immature births are females. However, the higher proportion of male infant deaths (55%-60%), and male neo-natal deaths (55%-60%) are consistent.

The 1973 infant and neonatal mortality rates did not decline in accordance with the trend of the past four years. The following comparative data are derived from previous annual reports.

	<u>BIRTHS</u>			<u>DEATHS</u>					
	<u>Total</u>	<u>Male</u>	<u>Female</u>	<u>Total</u>	<u>Infant</u> <u>Male</u>	<u>Female</u>	<u>Total</u>	<u>Neo-Natal</u> <u>Male</u>	<u>Female</u>
1969	92,403	47,389	45,014	1,699	974	725	1,353	758	595
1970	93,582	48,237	45,345	1,583	927	656	1,231	733	498
1971	86,755	44,360	42,395	1,462	802	660	1,130	629	501
1972	76,835	39,424	37,411	1,164	699	465	896	532	364
1973	72,237	37,185	35,052	1,104	656	448	861	510	351

The mortality rates per 1000 live births for the respective years are:

	<u>INFANT</u>			<u>NEO-NATAL</u>		
	<u>Total</u>	<u>Male</u>	<u>Female</u>	<u>Total</u>	<u>Male</u>	<u>Female</u>
1969	18.4	20.6	16.1	14.6	16.0	13.2
1970	16.9	19.2	14.5	13.2	15.2	11.0
1971	16.8	18.1	15.6	13.0	14.2	11.8
1972	15.1	17.7	12.4	11.7	13.5	9.7
1973	15.3	17.6	12.8	11.9	13.7	10.0

Males: _____

Females: - - - - -

Data from Table 3c illustrate how the rates for 1973 can vary among the regions of the state.

MORTALITY RATES

	Infant	Neonatal
State	15.3	11.9
Region		
1	15.8	11.8
2	17.7	13.6
3	16.0	12.3
4	12.4	10.1
5	12.2	10.0
6	22.4	18.0
7	11.6	8.8
8	15.1	11.4

DEATHS

When discussing deaths and its various causes, the usual concern is for the effects upon the population. Death rates can be used to indicate the extent to which certain segments of the population are being affected most seriously by what causes of death.

Another way of considering causes of death is in terms of proportional mortality, i.e., the proportion of total deaths due to a given cause. Here the attention is given to the causes of death and their relative seriousness as killers of society.

Table 4 presents the numbers of deaths due to 15 selected causes of death. The ten causes accounting for about 85 per cent of all deaths are common to both Massachusetts and the nation as a whole.

TEN LEADING CAUSES OF DEATH
(Per cent of total deaths)

	Massachusetts	United States*
Heart disease	39.4	38.1
Cancer	19.5	17.9
Stroke	10.1	10.9
Accidents	4.4	5.8
Influenza/pneumonia	4.4	3.1
Diabetes mellitus	1.9	1.8
Cirrhosis of the liver	2.1	1.7
Arteriosclerosis	1.6	1.7
Certain causes of perinatal mortality	1.2	1.6
Bronchitis, emphysema and asthma	1.4	1.5
All other	<u>13.6</u>	<u>15.9</u>
	100.0	100.0

(*Monthly Vital Statistics Report, vol.22, no. 13 (June 27, 1974);
National Center for Health Statistics, Rockville, Md. 20852).

In the ranking and the proportions of death causes, Massachusetts differs very little from the nation.

It is of interest to compare further the proportions of the total deaths due to the first five ranked causes for the Commonwealth and the regions therein.

FIVE LEADING CAUSES OF DEATH
(Per cent of total deaths)

	Heart	Cancer	Stroke	Accidents	Influenza/pneumonia
State	39.4	19.5	10.1	4.4	4.4
Region					
1	38.4	19.2	11.4	4.4	4.2
2	41.9	19.0	9.4	4.8	4.1
3	37.2	20.4	10.0	4.6	5.5
4	41.0	20.4	10.1	4.3	3.3
5	37.7	20.4	10.9	4.3	4.8
6	38.4	18.9	7.3	3.6	5.9
7	39.7	20.0	11.1	4.3	3.4
8	41.2	17.8	11.7	5.1	4.0

Table 6 lists the causes of death as coded in accordance with the Eighth Revision, International Classification of Diseases (Adapted). Not all causes are included, however; if no death occurred due to a particular cause, that cause is not listed. The headings given in Table 6 are helpful in supplementing understanding of cause categories used in other tables. For example, in Table 4's mortality data for 15 selected causes of death, abbreviations head the columns, but the ICDA code is provided to identify the cause. Note, however, that the codes in Table 4 are 3-digit; the codes in Table 6 are 4-digit and furnish a more detailed listing of causes included in the Table 4 categories.

It should be pointed out particularly that the cause of death labeled "Perinatal Mortality" is misleading. Codes 760-779 in Table 6 clarifies that the proper column specification is "Certain Causes of Perinatal Morbidity and Mortality". Thus, the data in Table 4 do not give perinatal mortality throughout Massachusetts; rather, they account for many of the deaths of babies in the first few hours of life as a result of the causes detailed in Table 6.

Another clarification from Table 6 is the detailed types of accidental deaths (code 800-999) summarized in Table 10.

Death rates which are specific for age, sex, and age-sex are frequently useful for extracting more significance from vital statistics. The numerators are the number of deaths occurring within a given age, sex, or age-sex group, and the denominator is the number in the population at large of the respective age, sex, and age-sex groups. Although the deaths in question (numerator) may occur in a year different from that of the census data (denominator), the inconsistency can be tolerated in the interest of increased meaning. Certain causes of death are found primarily among adults, such as cirrhosis of the liver, for example. It makes more sense to compare the number of cirrhosis deaths occurring among specified age groups with the number of adults in the population of the same age. Similarly, since cancer of the cervix causes death among only females, a death rate for that cause should be determined on the basis of how many women are in the population. A cancer-of-the-prostate death rate among older men is an example of an age-sex specific rate for a particular cause. In some of the death tables in this report counts for sex and age are given; denominators for some specific rates for the state as a whole are provided in Table 21. For smaller geopolitical entities, the reader is referred to the 1970 census data to be found in General Population Characteristics, Massachusetts, PC (1) - B 23, Bureau of the Census, U.S. Department of Commerce. Most libraries have copies of this publication.

Age-specific death rates can be calculated for the state from tabular data in this report. If the desire is to compare the state and geographic sub-units within the state, rates for the latter can be derived by assuming their distributions of sexes and age-groups to approximate those of the state.

If a comparison of the sexes or age-groups within a sub-unit is sought, reference to the census publication just cited is recommended; the more refined comparison should be based upon more refined data. The derivation of deaths per age-group in the smaller units, however, must depend upon the proportions for the state (Table 7) in the absence of a table of deaths by age per residence.

To illustrate the foregoing, let the question be "What is the age-specific death rate for 50-59 year olds in Region 3, Area 14 as compared to the state's"? In the state there were 6,219 deaths in 1973 who were aged 50-59 years (Table 7); there were 616,308 persons of that age in 1970 (Table 21). The age-specific death rate in question, therefore, is $6,219/616,308$, or 10.1 per 1,000 individuals in the state. The total population in 1970 for Region 3, Area 14 was 129,174 (Table 23); if the proportion of the state's population in their 50's ($616,308/5,689,170 = .108$) is assumed to hold in Region 3, Area 14, the number is 13,951. If the proportion of the state's deaths in their 50's ($6219/57,179 = .109$) is assumed to hold for Region 3 Area 14's 1253 deaths (Table 3c), the number of decedents of that age is 137. The age-specific death rate for 50-59 year olds in Region 3, Area 14, therefore, is derived as $137/13,951$, or 9.8 per 1,000 persons. (Reference to the census data for Belmont, Waltham, and Watertown shows that the actual 1970 count of persons 50-59 years of age was 14,698, and the age-specific death rate consequently is more accurately 9.3 per 1,000 persons).

Marriages and Divorces

Detailed marriage data are presented in Tables 5 and 17 through 20. Between 1970 and 1972 there was a slight increase of 897 marriages (1.9 per cent). But between 1972 and 1973 there was a decrease of 3.2 per cent, no less than 1549 fewer marriages occurring in Massachusetts. Among the tabular information are the facts that:

84 per cent of the marriages were between residents of the Commonwealth; neither partner was a resident in 4 per cent of the cases.

Bride and groom were both being married for the first time in 73 per cent (34,269) of the marriages; among those having been married before, the average number of prior marriages was the same, 1.1, for both sexes.

The divorce data which come to the Vital Events Program are not complete records of divorces; rather, the records are abstracted by the courts and this material is transmitted to the Secretary of State's Registrar of Vital Statistics. The information is then made available to the Department of Public Health for inclusion in its Annual Report of Vital Statistics. But the data are amenable only to aggregate tabulations and do not consist of factors such as number of children affected, for example, which could be used for more meaningful analysis.

The finalized divorces granted in 1972 in the counties of Massachusetts are as follows:

DIVORCES AND ANNULMENTS GRANTED BY COUNTY

<u>County</u>	<u>Divorces</u>	<u>Annulments</u>	<u>County</u>	<u>Divorces</u>	<u>Annulments</u>
Barnstable	410	2	Hampshire	359	3
Berkshire	444	3	Middlesex	2431	2
Bristol	1276	16	Nantucket	26	0
Dukes	28	0	Norfolk	1234	8
Essex	1559	12	Plymouth	1105	21
Franklin	242	1	Suffolk	1678	25
Hampden	1222	15	Worcester	1893	25

State total: 14,407 divorces; 133 annulments

The 14,407 divorces granted in 1973 in Massachusetts were practically the same (14,273) as for 1972. For the past five data years, the annual number of divorces has changed as follows:

<u>Year</u>	<u>Number</u>	<u>Per cent change</u>
1969	10,654	
1970	10,818	+1.5
1971	12,717	+17.6
1972	14,273	+12.2
1973	14,407	+0.9

TABLE 23

TABULATIONS FOR REGIONS AND AREAS INCLUDED IN THIS REPORT REFLECT
THE SUBSTATE REGION CODING SYSTEM DEVELOPED BY THE EXECUTIVE OFFICE
FOR ADMINISTRATION AND FINANCE

(REGION/AREA 1970 POPULATION IN PARENTHESES)

REGION 1 AREA 1 (149,402)

ADAMS	NEW ASHFORD
ALFORD	NEW MARLBOROUGH
BECKET	NORTH ADAMS
CHESHIRE	OTIS
CLARKSBURG	PERU
DALTON	PITTSFIELD
EGREMONT	RICHMOND
FLORIDA	SANDISFIELD
GREAT BARRINGTON	SAVOY
HANCOCK	SHEFFIELD
HINSDALE	STOCKBRIDGE
LANESBOROUGH	TYRINGHAM
LEE	WASHINGTON
LENOX	WEST STOCKBRIDGE
MONTEREY	WILLIAMSTOWN
MOUNT WASHINGTON	WINDSOR

REGION 1 AREA 2 (182,151)

AMHERST	LEVERETT
ASHFIELD	LEYDEN
BERNARDSTON	MIDDLEFIELD
BLANDFORD	MONROE
BUCKLAND	MONTAGUE
CHARLEMONT	MONTGOMERY
CHESTER	NORTHAMPTON
CHESTERFIELD	NORTHFIELD
COLRAIN	PELHAM
CONWAY	PLAINFIELD
CUMMINGTON	ROWE
DEERFIELD	RUSSELL
EASTHAMPTON	SHELBURNE
ERVING	SHUTESBURY
GILL	SOUTHAMPTON
GOSHEN	SOUTHWICK
GRANVILLE	SUNDERLAND
GREENFIELD	TOLLAND
HADLEY	WENDELL
HATFIELD	WESTFIELD
HAWLEY	WESTHAMPTON
HEATH	WHATELY
HUNTINGTON	WILLIAMSBURG
	WORTHINGTON

REGION 1 AREA 3 (162,810)

BELCHERTOWN
CHICOPEE
GRANBY

HOLYOKE
LUDLOW
SOUTH HADLEY

REGION 1 AREA 4 (259,298)

AGAWAM
EAST LONGMEADOW
HAMPDEN

LONGMEADOW
SPRINGFIELD
WEST SPRINGFIELD
WILBRAHAM

REGION 2 AREA 6 (139,184)

ASHBY
AYER
BOLTON
CLINTON
FITCHBURG
GROTON

LANCASTER
LEOMINSTER
LUNENBURG
PEPPERELL
SHIRLEY
STERLING
TOWNSEND

REGION 2 AREA 7 (74,834)

ASHBURNHAM
ATHOL
